Chandrakanth Peravelli

Staff Software Engineer @ Cloudera
Greater Minneapolis-St. Paul Area

Summary

With a solid track record at Target, my expertise in enterprise automation and microservices architecture has led to substantial cost savings and efficiency gains. Spearheading the development of a 3D automation pipeline, I have harnessed technologies like Airflow, Node.js, and Python to achieve around \$2M in savings for Target and its partners.

My approach focuses on crafting algorithmic solutions and engaging with key stakeholders, such as major US carriers, to optimize operations. Utilizing my proficiency in PySpark, Spring Boot, Kafka, and an event-driven framework, I have contributed to over \$1M in annual savings through enhanced online order fulfillment for guests. These achievements reflect my commitment to innovation and excellence in software engineering within the retail industry.

Experience

Cloudera

Staff Software Engineer

August 2024 - Present (2 years 2 months)

United States

Target

6 years 5 months

Lead Engineer

November 2020 - August 2024 (3 years 10 months)

Austin, Texas, United States

- Architected and led the development of an enterprise-grade 3D automation pipeline, utilizing cutting-edge technologies including Airflow, Node.js, and Python Resulting in saving around \$2M between Target and its vendors.
- Designed and orchestrated the development of multiple microservices architectures, seamlessly integrating Kafka for real-time data streaming with

AWS S3, GCP, Spring Boot, Kotlin, Postgres, and MongoDB backing the 3D automation system.

- > Crafted algorithmic solutions to enhance guest online order fulfillment using PySpark, Python Spring Boot, Kafka, microservices, and an event-driven framework, resulting in annual savings of over \$1M.
- > Engaged with major carriers in the US to simulate performance impacts akin to holiday periods and proposed changes to handle over 1000+ requests per second.
- > Developed an enterprise-level language agnostic security package to manage security and token validation with OAuth, leveraging Spring Boot, Flask, and Node.js frameworks.
- > Pioneered an enterprise-level Target search engine tailored for retrieving any Target products based on their metadata, leveraging Elasticsearch's capabilities with fuzzy, exact, and autocomplete functionalities.
- > Implemented automated functional testing and performance testing within the CI/CD pipeline, streamlining developer workflows and facilitating the maintenance and creation of high-performing code.

Senior Engineer

April 2018 - November 2020 (2 years 8 months)

United States

Best Buy

Senior Software Engineer

April 2015 - April 2018 (3 years 1 month)

United States

- > Developed the Best Buy Enterprise Microservices Library to mitigate API redundancy across numerous applications managing identical datasets, resulting in a 30% reduction in developer effort.
- > Developed custom dashboard and metrics in Grafana/Kibana to view the Error reports and access logs.
- > Designed swagger UI for API testing and documentation using swash buckle and Open API principles.
- > Developed intuitive UI screens and integrated state management with React Redux to enhance user experience and streamline data flow in web applications.
- > Optimized database performance using PostgreSQL and implemented efficient data access with jOOQ, ensuring rapid query execution and enhanced system responsiveness.
- > Implement and manage cloud-based solutions on Amazon Web Services (AWS), leveraging various services to meet project requirements.

- Conducted thorough and insightful code reviews, fostering collaboration, identifying potential issues, and ensuring adherence to coding standards for superior code quality.

Tata Consultancy Services

Software Engineer

November 2011 - May 2015 (3 years 7 months)

Chennai, Tamil Nadu, India

- Coding and designing the application solution with Spring boot and react.
- Implemented continuous data movement from Archive tables to S3 buckets in Aws.
- Configured Usage service endpoint in AWS API gateway to consume data from usage capture system and provide response to client.
- Involved in the performance tuning, Query optimization, Code Review at the end of the application development.
- Utilize build automation tools like Maven and implement unit and integration tests using JUnit, TestNG, or equivalent frameworks to ensure code quality and reliability.
- Demonstrate strong problem-solving skills to identify and resolve technical challenges and optimize system performance.

Education

Anna University

Bachelor of Technology (B.Tech.), Information Technology · (2007 - 2011)
